How to Measure a Wheel (OTR)

1. Tire Size with Model:

The size of your tire is a series of numbers and letters on the tire, just below the Manufacturer's name. For example: 20.5 x 25 XGC.

2. Number of Bolt Holes:

Count the number of Bolt Holes on the Wheel.

3. Bolt Hole Type: Hub Piloted Stud Piloted

Are the Bolt Holes Hub Piloted (straight) or Stud Piloted (beveled)? See Figure 1.

4. Bolt Hole Diameter:

Measure across the center of a single Bolt Hole. See Figure 1.

5. Bolt Circle:

*Measure the distance from the **Inside Edge** of one bolt hole, to the **Outside Edge** of the bolt hole directly opposite (such as from 12 to 6 on a clock). See Figure 2.A.*

6. Pilot Inner Diameter:

Measure the distance across the center of the Pilot. See Figure 2.B.

7. Front Space:

Measure the distance from the front of the disc to the front plate of the wheel. See Figure 3.

8. Disc Thickness:

Measure the thickness of the disc itself. See Figure 3.
