

# Highway Wheels - Stud Piloted Wheels

Definition- Stud Piloted wheels are centered on the studs or bolt holes of the hub. The bolt holes edges are tapered or chamfered - not straight

Often referred to as Budd Style wheels or Budd wheels. Stud Piloted wheel measurements are often referenced in inches whereas Hub Piloted are in millimeters (mm).

Hub Piloted wheels can easily be identified by straight, non-chamfered, and non-tapered bolt holes edges.
